

Practice Safe Browsing

There is a way to keep your search history private. This only works if you **open a PRIVATE or INCOGNITO window before you begin your internet search**. SARC cannot make any guarantees, but we feel this is important information to share with our website visitors. Here are instructions on how to open these private windows:

Google Chrome

When using Google Chrome, push CTRL + SHIFT + N. This will open a new INCOGNITO, private window.

Internet Explorer

When using Internet Explorer, push CTRL + SHIFT + P. This will open a new IN PRIVATE window.

Mozilla Firefox

When using Mozilla Firefox, push CTRL + SHIFT + P. This will open a new PRIVATE window.
